Identifiers- *Virgin Valley High School, Mesquite, Nevada

The procedures, forms, and philosophy of the computerized modular scheduling program developed at Virgin Valley High School are outlined. The modular concept is eveloped as a new approach to course structure with explanations, examples, and worksheets included. Examples of courses of study, input information for the data processing center, output information from the data processing center, instructions to teachers and students, group instruction techniques, and a master schedule add significance to the narrative. The document concludes with anticipated results. A related document is RC 002 478. (SW)

They're Not Kids! They're Modules!

By BERARD WARMAN
[illegible]

Darwin GGrow fell asleep while Alph, the sacred river, ran through caverns measureless to man, down to the sunless sea.

DARWIN, a stubby, pugnacious blood, used his independent judgment to determine that he could afford to pass up a few minutes of the famous Coleridge description of the real estate at Xanadu.

His teacher, reading to the 12th grade English class, let Darwin have his little snooze in peace. ("Oh, well, he isn't bad," the boy later said of Coleridge.)

Darwin is going to be an electronics engineer. Mr. Smith, who teaches literature, as well as music and speech, figured his pupil's future would not be seriously hampered by his missing a gaudy poem about a pleasure dome.

ON THE next row of seats in the 12th grade English class at Virgin Valley High School in Mesquite is Mike Easton. Mike digs Xanadu — he talks like he's been there — and he is extremely hip to writing science, math, football, basketball, government, photography, yearbooks, business and lunch. Mike knows how to live.

Dorwin and Mike are among 160 secondary students at Virgin Valley. They are all undergoing one of the most important experiment in the history of education.

"We shot the works," said Blaine W. Allan, principal of Virgin Valley. "We threw everything at them."

"EVERYTHING" means a conception of schooling in terms of modules. A module, in architecture, is an arbitrary measurement — of one pillar, for instance — by which the size and strength of everything else in the structure can be computed.

In schooling, Dorwin, Mike and all the rest are modules. So are their teachers. So are their classrooms. So is their time.

Into a data computer at Stanford University go these details:

— THE STUDENT. What kind of person is he, what does he want, what can he do?

— The school. How much is available for what?

(See VIRGIN VALLEY, Pg. 13)

Virgin Valley Students Aid in New Experiment

(Continued from Page 1)

— The teachers. How can their time be best used? How can their particular talents be best exercised?

OUT OF IT, miraculously, come these decisions:

— Which class is held at which time. And where.

— Which students go to which class at what time.

— HOW FAR a student can go in his special field, or one which he may acquire along the way?

The computer allows the kids free time, as much of it is their records show they can handle.

The free time is not only for homework — though Virgin Valley kids get most of it done during school hours — but for the independent, the little pursuits that a kid might not ever do.

THIS IS A curious school. It may be the only one in the country which reconvenes a class on the same day, two-and-a-half hours after it has been dismissed.

Harold Wittwer was conducting his youngsters under a disadvantage. The boy who was supposed to make the current events report was serving as scorer in an elementary school basketball game between the 5th and 6th graders of Virgin Valley and those of Moapa Valley.

"WE'RE going," said Wittwer, "to take an alternate topic and discuss it."

"THE BEATLES!" cried a girl.

Wittwer, who may have found the Beatles the farthest thing from his mind, assented.

THE LENGTHY discussion — "didn't the juniors scream while Bobby Rydel was at the hotel?" — ended in confusion.

At the end, nobody knew why girls scream at the Beatles. They only had suspicions.

"It's kind of childish," Mike Easton said afterward. "But it sort of makes you think."

TOMORROW: Wide place in the road.

INTRODUCTION

Early in the fall of 1963 the faculty and staff of the Virgin Valley High School, located at Mesquite, Nevada, began to experiment with modular scheduling, using the computerized technique developed by Dr. Dwight Allen and the Secondary School Project of Stanford University. The computer technique had been used previously with several larger schools, but had not been attempted in a smaller school.

Through the joint efforts of the Secondary School Project and the Western States Small Schools Project, of which Virgin Valley High School is a member, a computerized modular schedule was developed and placed in operation. It was (and is) hoped that the information gained might prove to be helpful not only to other schools within the WSSSP, but to all small schools in which scheduling problems occur.

Mr. Blaine Allan, Principal of the Virgin Valley Schools, is primarily responsible for the compilation of material and information contained in this report. To him, and to all who have been associated with the effort, much credit is due.

As the Mesquite Project enters its second year, changes, based on knowledge gained, will be made. These will be reported in follow-up reports. Meanwhile, questions pertaining to the first phase may be directed to either Mr. Allan or the WSSSP.

INTRODUCTION

Virgin Valley High School is located in Mesquite, Nevada. The school is in Clark County, 85 miles east from Las Vegas. It is a kindergarten through 12th grade school with a total enrollment of 365 students, operating on a 6 - 6 plan.

The school is a member of the Western States Small School Project and is one of four schools selected by Stanford University to pilot Modular Scheduling, using the data processing method. The school now operates on four types of instruction:

1. Large group.
2. Small group (seminar size).
3. Laboratory group.
4. Independent learning (study or project size).
   (See NOTE on Pages 4 & 5.)

The time and size assigned to each group are determined by the task, or lesson to be learned.

Accreditation

Virgin Valley School is accredited by the Northwest Association of Secondary and Higher Schools and has been continually since 1939.

Faculty

Teachers with Master's Degree 5 Teachers with Bachelor's Degree 14

All classroom teachers have a minimum of a Bachelor's Degree, including one Special Education teacher.

Enrollment

7th Grade . . . 24 students	10th Grade . . . 28 students
8th Grade . . . 17 students	11th Grade . . . 27 students
9th Grade . . . 38 students	12th Grade . . . 25 students

Student - Teacher Ratio

k - 12 is 19.2 7 - 12 is 13.8 .Northwest Accreditation 14.36

Percentage of graduates who enter college is 67%.

Students of Virgin Valley High School are above the national average on test scores.

VIRGIN VALLEY HIGH SCHOOL COURSES OF STUDY

	GENERAL HIGH SCHOOL: Leads to High School diploma ONLY; not beneficial for College entrance	COMMERCIAL: Leading to future work as salesman, buyer, clerk, accountant, secretary, steno, receptionist, store-keeper, office and clerical work.	VOCATIONAL: BOYS: Apprentices in trades of carpentry, auto mechanics, electricians, welders, etc. GIRLS: Future work as dressmaker, homemaker, hostess, cafeteria work etc.	COLLEGE PREPARATORY: Leading to future work as teacher, engineer, doctor, inventor, mathematician, lawyer, social worker, librarian, designer, psychologist, writer, or other professional work	ELECTIVES:
FRESHMAN:	English I Phys. Education World History Algebra or Gen. Math 3 Electives	English I Phys. Education Algebra or Gen. Math Type I 3 Electives	Boys: English I, Phys. Ed., Alg. or Ma., Ag. I, 2 Electives Girls: English I, Phys. Ed., Alg. or Ma., Home Ec. I, 2 Electives	English I Phys. Education Algebra or Gen. III, Geometry, Sp.-Deb., Chem, arts-crafts, Drama Physics, Bkkg, off. practice, Shorthand Bus. Eng., Econ. & Family Living.

NOTE:

TYPES OF INSTRUCTION

1. Large Group Instruction.

Examples:

1. Illustrated lecture.
2. Making assignments.
3. Testing.
4. Guest speaker or resource person.
5. Televised lesson.
6. Motion picture.

Purposes:

1. Conserve teaching time.
2. Improve quality of instruction.
3. Use resource persons.
4. Efficient use of audio-visual.
5. Efficient use of facilities.

Physical Facilities:

Writing boards or chairs with arm for writing available for large group.

2. Small Group Instruction. (Groups of students having the same interests.)

Examples:

1. Analytical discussion.
2. Exploratory discussion.
3. Reporting.
4. Testing of understanding.

Illustrative purposes:

1. To provide opportunity --

For individual participation.
To discuss ideas raised in large-group or laboratory discussion.
For close student-teacher relationship.
To test effectiveness.
For grouping of pupils.

Physical Facilities:

Table and chairs.

3. Laboratory Group Instruction.

Special Equipment

Examples:

Science Lab.	Libraries
Language Lab.	Social Studies Lab.
Math Lab.	Office Machines
Art & Shop	Playing Fields & Gym
	Instructional Materials

Types of Labs:

1. Experimental
2. Drill
3. Application
4. Research

Physical facilities are unique for each type of laboratory.

4. Independent Learning.

Examples:

1. Reading
2. Writing
3. Drill
4. Conferences
5. Memorization

Purposes:

1. Promote independence.
2. Provide opportunity for study under optimum conditions.
3. Provide opportunity for study of topics beyond regular curriculum.
4. Permit maximum use of instructional resources.

Physical facilities required:

1. Library
2. Laboratory
3. Study rooms
4. Individual study alcoves

Western States Small Schools Project

During the course of the 1962-63 school year, the Director of Area Schools, Lyal W. Burkholder, attended four, separate one-day conferences of principals of small high schools in the State of Nevada that are project schools of the Western States Small Schools Project. This project operates in five states (Arizona, Utah, Colorado, Nevada and New Mexico) under a grant from the Ford Foundation. Its purpose is to discover and develop, through experimentation, new and different techniques in teaching and space utilization that will improve the educational program of the small high school, both in quality and enriched curriculum offerings. The WSSSP was organized in Nevada in January of 1962 under the directorship of David L. Jesser, with ten Northern Nevada small high schools as project member schools. As a result of the Director's attendance at these WSSSP workshops, two Clark County Schools have been invited to become project member schools. These schools are Virgin Valley High School and Blue Diamond Elementary and Junior High School. During June, 1963, Principals Blaine Allan and Ronald Riding, together with four of the teachers of these schools attended a two week workshop of the WSSSP conducted on the campus of the University of Nevada at Reno. Expenses for attendance for these staff members were paid by the Ford Foundation. In order for a school to be admitted as a member project school of the WSSSP, it is necessary that the governing Board of School Trustees adopt and transmit to the Project Director, David L. Jesser, State Department of Education, Carson City, Nevada, the following resolution:

WHEREAS the Board is willing to participate in and do everything to assure the success of the Ford Foundation Program in the small schools;

BE IT RESOLVED that the Board of Trustees of the Clark County School District agrees to the following conditions:

(1) provide reasonable and necessary equipment and materials to successfully conduct the project within the school.

(2) waive those requirements which appear to restrict, deter, or in any way, deny the free and unrestrained perusal of methods and techniques which are specifically designed to assist in the development of the project.

(3) permit participating administrators and teachers reasonable and necessary released time to participate in in-service training activities connected with the project.

(4) declare an intent to make available to its project schools, administrators, and teachers any and all local resources that may be necessary to conduct the project.

(5) declare an intent to participate in the project for the remaining term of the grant unless extenuating circumstances dictate otherwise.

(6) agree to submit necessary and reasonable reports for evaluating information and to submit other information as may be necessary.

Signed this 22nd day of August, 1963.

/s/ Dell H. Robison

/s/ Chester T. Sewell
/s/ Helen C. Cannon
/s/ Walter A. McCall

Mrs. Cannon seconded the motion. The motion carried.

Note: Each teacher is to structure his own classes according to blocks of time desired, to complete the teaching cycle. This is known as course structure.

Blaine W. Allan

Dwight W. Allen

Developing a Modular Concept of Course Structure

Tradition has led us to assume that each class offering is structured like every other class offering, i.e., each class is composed of 30 students and meets about fifty minutes daily Little variation has evolved from this basic format of secondary education established over one hundred years ago in the Boston Grammar School. Nevertheless, educators will agree that all curricular offerings should be taught in a manner which maximizes the ability to learn -- and that this probably is not possible for all subjects in the same structural format.

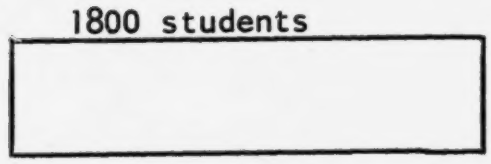
The purpose of the accompanying worksheets and examples is to help conceptualize a new approach to course structure - an approach build upon the concept of a modular schedule with the assumption that widely variant course structures are appropriate.

A modular concept of course structure is predicated on the premise that those involved with curriculum planning can determine explicitly what kinds of specific learning activities students need to have. The modular concept is then adapted in such a manner that the facilitation of those elements (namely: organization of course structure, number of students involved in specific groups, teacher-pupil ratio and specific time allocations) associated with the learning activities becomes manageable.

The Curriculum May Be Considered a Function of Area

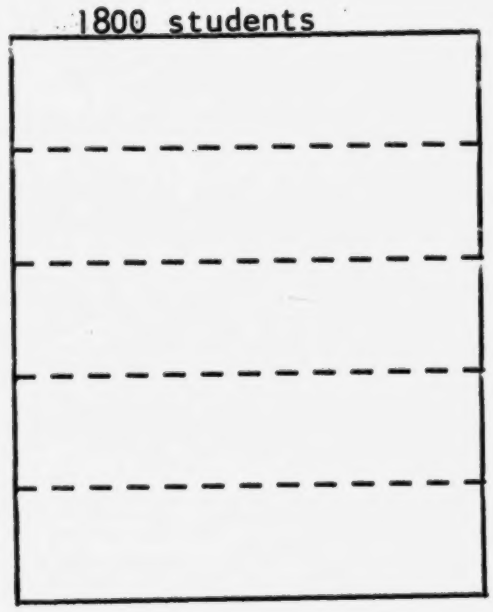
The entire curriculum can be thought of as an area to be scheduled. The horizontal dimension represents the number of students, the vertical dimension represents the length of time. If the school has eighteen hundred students and the school day lasts from 8 A.M. to 4 P.M., the curriculum area could be shown in Figure 1.

Figure 1: The area of the curriculum when a daily schedule is used.



If a weekly schedule is used, the curriculum area becomes that area shown in Figure 2.

Figure 2: The area of the curriculum when a weekly schedule is used.



The Concept of Modular Units in Curriculum Planning

The curriculum, conceived as an area to be scheduled, is made up of sub-parts called modular units which are derived from units of time and numbers of student schedules. The modular unit chosen for time should be chosen according to the smallest amount of time that is desired for any instructional purpose. If 40 minute, 60 minute, or 120 minute classes are desired, a 20 minute module would be appropriate. The number of students selected should be also stated in terms of desired class sizes. A ten-student module would accomodate classes of 10, 20, 30, 40, etc. Though any modular unit can be selected for either period length or class size, it is desirable to select as large a modular unit as appropriate to reduce the complexity of scheduling.

One possible modular unit is that of 15 students meeting for a single half-hour period.

15 students

1/2 Hr.

Scale: 15 students = 3/16" width

1/2 hour = 3/8" length

Thus a "class" of 30 students meeting for an hour (a conventional class unit) would appear as a multiple of the modular unit:

30 students

1 hr.

A wide variety of structures is possible, all multiples of the basic modular unit;

150 students

1/2 hr.

15 students

1-1/2 hrs.

30 students

1/2 hr.

60 students

2 hrs. 
300 students

1 hr. 
Note that many other basic modular units are possible:

5 students		10 minutes
10 students		15 minutes
15 students		20 minutes
30 students	for	30 minites
50 students		60 minutes
etc.		etc.

Modular units that have been considered by school districts for planning are:

15 students for 30 minutes
15 students for 20 minutes
30 students for 15 minutes
15 students for 25 minutes
10 students for 10 minutes

The smaller the modular units, the greater the flexibility -- but also the greater the complexity.

On the pages which follow are examples of various course structures which have been developed from the modular concept of the course structure. Before progressing to the worksheets and attempting various course structures, familiarization with the examples presented is highly recommended.

LIMITATIONS FOR PROGRAMMING

1. Faculty meeting - two modules per week.
2. Class meetings - one module per week.
3. Girl's P.E. and Drill Team A.M. for Gym.
4. Boy's P.E. and Athletics P.M. for Gym.
5. Co-ed P.E. for 7th and 8th grades.
6. All Vo-Agriculture boys - one module per week.
7. All Home Ec. girls - one module per week.
8. Spanish - two sections.
   Health - two sections.
   English I - two sections.
   Typing I - two sections.
9. Team teaching:

Science 7th and 8th	Prows & Chamberlain
English IV	Smith & Dunn
Athletics	Hughes & Wittwer
World History	Hughes & Wittwer
Gen. Math	Clarke & Chamberlain
Family Living & Econ.	Williams & Lee

Input Information

IV OUTPUT INFORMATION - FROM DATA PROCESSING CENTER

A. Student Programmed Class Schedule.

1. Evon Bundy, 7th grade.
2. Todd Tobler, 12th grade.

Five copies of each of the following programmed sheets are printed by the computer. The five student schedules are used as follows:

1. For administration office.
2. For the counsellor.
3. For the attendance officer.
4. For the student.
5. For the student.

In the event the student loses the second copy, he is required to purchase another from the office.

B. Student Programmed Teacher Assignment.

1. Mr. Reid
2. Mr. Prows

C. Student Programmed Room Assignment.

1. Sample: SS 1 (Each room is scheduled similar to this sample copy: the open spaces indicate when the room is available for independent work.)

D. Class List.

1. Mr. Reid - Vo-Ag. 901

2. Mr. Wittwer - Am. History 263

NOTE: The teacher assignments, room assignments and class lists are utilized at the discretion of the administrators and teachers.

Each teacher received a class list for each phase of the course structure. From this class list he makes up his permanent roll, adding to and taking from it as needed.

STUDENT. 9Bundy Evon (Grade 7)

V WORKING INSTRUCTIONS TO TEACHERS AND STUDENTS

A. Information for Teachers - First Day of Operation,

B. Information for Students.

1. Room Keys, Student Attendance, Schedule Changes and Problems.

2. Abbreviations for Courses.

3. Departments and areas open for independent learning.

C L A R K C O U N T Y S C H O O L D I S T R I C T
Virgin Valley High School
Mesquite, Nevada

I N F O R M A T I O N F O R T E A C H E R S

FIRST DAY OF OPERATION

1. Room Assignments:

   Teacher's schedule reflects correct assignment.
   Student's schedules (in some cases) do not. (There have been changes.)
   Students will report as is indicated on the Sheet of Directions.
   Please meet students at assigned place and take them to correct area.
   PLEASE NOTE: Make certain each student corrects his own schedule so he will know where to report for your class.

2. See every student schedule during the first cycle and check with class lists.

3. Any student not showing up in a class where he has been enrolled regularly will necessitate a teacher check of the master student schedule in the office.

4. Students are to remain in scheduled classes until the teacher has notified the office and the office releases the student.

5. Each teacher should talk to his students about independent study and independent use of their time. Make certain your schedule is posted so that students will know of your independent time. Make known to them when they are welcome to work with you.

6. No changing of rooms, student's schedules and teacher assignments until after the Christmas holidays -- then only by mutual agreement.

7. Make yourself available in the breeze-ways and student areas to assist students as much as possible.

8. Pick up pace on homework and assignments as we go into this schedule.

   Do everything possible to make this succeed -- we are obligated to give this a real test.

ABBREVIATION	ROOM
AUD	AUDITORIUM
SS	SOCIAL STUDIES #1
SS1	ENGLISH ROOM
SS2	SOCIAL STUDIES #2
SCI	SCIENCE ROOM
HE	HOME ECONOMICS
COMM	COMMERCIAL ROOM
MUSI	MUSIC ROOM

STUDENT ATTENDANCE

Attendance checks will be made at 9:00 A.M. and 2:55 P.M. Students not enrolled in classes at these times will report to lunch room for their attendance check.
All students are to be at school between 9:00 A.M. and 3:00 P.M. Maximum, one hour lunch period.
All students are expected to receive permission to leave the campus at any time during the school day. Exceptions - before 9:00 A.M. and after 3:00 P.M.

SCHEDULE CHANGES

There will be no schedule changes until after the Christmas holidays. If you desire a conference concerning your schedule, come to the office during independent schedule time and make an appointment. In the meantime, follow your schedule exactly as it is printed.

PROBLEMS

If you have a question, ask your teachers for help.
Teacher dismisses the class - on the hour and half-hour. Go directly to your next scheduled class.

EXAMPLES OF TYPES OF MATERIALS AND ACTIVITIES

THAT ARE APPROPRIATE

EITHER TO LARGE GROUPS OR TO SMALL GROUPS

	Large	Small
Reading	Extension of vocabulary Dramatization Choral speaking Testing	Phonics Oral reading Building of vocabulary (Vocabulary development) Testing
English	Introduction of new skills Presentation of oral reports Reinforcement of skills Testing	Remedial instruction Creative writing Preparation of oral reports Preparation of school newspaper Testing
Spelling	Introduction of new words Written practice Testing	Testing Clarifying the meaning of words Analysis of words Extension of vocabulary for able Extension of vocabulary for slow
Handwriting	Introduction of letter form Improvement of common errors Practice	Remedial instruction

	Large	Small
Social Studies	Introduction to unit of study Clarification of concepts Concluding activities of unit Testing	Study skills Preparation of project Research Simplification of material Testing
Science	Introduction to unit of study Demonstration of experiment Concluding activity of unit Testing	Experimentation Recording of experiment Research for reports Reinforcement of basic skills Testing
Arithmetic	Introduction of new skills Clarification of concepts Testing	Extension of skills for able Simplification of terms and concepts for slow Remedial instruction Testing
Library	Story telling by teacher Presentation of book talks by children Appreciation of poetry Introduction of library skills	Individual research Refinement of skills Deepening of appreciation Training of pupils as aides

Physical Education
Art
Music

Special subject teams are not teams in the technical sense but they collaborate in planning activities involving all children in a team.

VII ANTICIPATED RESULTS - BLAINE W. ALLAN

ANTICIPATED OUTCOME

1. Role of the teacher:

   The teacher's role will be changed from teaching (handing out facts, verbal or printed) to that of director of learning (a resource person directing individuals or small groups to sources of knowledge). He does not subordinate himself to the students.
   Dr. Heller says, "The teacher does not abdicate his authority, he delegates it."
   He tries to get the pupils to carry the discussion, but will become part of the learning situation. He will step in to correct errors of facts. To keep the main issues in focus, encourage all students to participate. He will work through the questions of "why" and "how" to alert the students rather than through direct imposition.

   In the words of James E. Smith, Administrative Assistant, Ridgewood High School, Norridge, Illinois, "We're not a nine-to-three group. We're an eight-hour-plus Saturday Faculty, and that's a minimum of what most teachers are doing.

   Teachers will be more concerned with learning and less concerned with teaching. Teachers will spend more of their time planning and studying.

2. The school plant will change its 30' x 30', 30-student classrooms to independent carrells, student laboratories, conference rooms, small-group areas, teachers' study areas, etc.

3. Increase class attendance -- Decrease cutting of classes and truancy. More individual attention to each student results in more interest in school subjects and activities. Thus the student will attend classes more regularly.

4. Increase library circulation.
   The Marshall High School of Portland, Oregon, has experimented with the modular schedule and testifies to a definite increase in library book circulation, primarily due to individual study and the quest for knowledge.

5. Reduce vandalism.
   Vandalism, like truancy, will be reduced because of high interest in school classes and activities. Since students have the opportunity to make their own decisions, they take more pride in their school buildings and surroundings.

6. Reduce number of "Drop-outs".
   Frank Brown, Principal of Melbourne High School, Melbourne, Florida, says that drop-outs have been reduced from 33% to less than 5% since experimenting with non-graded classes and flexible scheduling.

7. Increase individual, home, school and community pride.

8. Motivate students to quest for knowledge.

Wide Place in Road Carves Niche

By DONALD WARMAN
R-J Staff Writer

At first glance, Mesquite, Nev., is the last place in the country where you would expect a revolutionary school experiment to be carried out.

MESQUITE is, to a city person, little more than a wide place in the road. There are a couple of big dairy farms in the area, but Mesquite's economy is basically that of the rural South. Cafes, motels and gas stations sustain the township of 600 and its surrounding farm area of another 600.

Citizens of Mesquite do not feel much kinship with Las Vegas. When they go out "on the town," they usually go to St. George, Utah, which is closer, both in mileage and in spirit.

St. George is, like Mesquite, a Mormon community boasting 6,000 residents, it is a big city to those who live on the little town beside the road.

BEGINNERS of Utah are everywhere in Mesquite. It is, on the surface, one of the most conventional communities anywhere.

Virgin Valley's faculty is composed entirely of Mormons. That is not a sign of religious prejudice, but of the outsider's hesitancy.

"We had one Gentile teacher here last year," Virgin Valley Principal Blaine Allen told a guest in his office.

"But our social life centers around the stake, and this man didn't feel at home. He quit."

Besides the stake and its Mutual Improvement Assn.'s there seems to be little to do in Mesquite.

BUT LOOK again. Only four high schools in the west have taken up the experimental cause of modular programming.

Virgin Valley is one. The results have been spectacular.

Modular scheduling is even with a mathematical equation which correlates the student with his teachers, his subjects and his class time.

At Virgin Valley, where the scheduling began only eight weeks ago everybody is happy.

CONSIDER the case of Mike Easton. He is a handsome, well-spoken, intelligent senior of 17 who is editor of his school yearbook. He wants to be some sort of scientist, but he is not letting anything else go by.

The computer figured that Mike, who is of considerably more than average intelligence needs less class time than he pays. He also needs identical a minimum during an English discussion of Coleridge's "The Pleasure Dome of Kubla Khan."

Mike gets extra modules of free time to work on the yearbook for one or two hours every morning. He also will get an edition in every contest in which the Vireo has been entered it has ranked high in nearly all places.

HIS CLASS day is definitely broken up.

On Modules 5-6 (10:11 a.m.) he has American government 261 on Mondays, Wednesdays and Fridays, and Physics 431 on the other days.

But on Mondays and Wednesdays, Mike returns to Harold Wilmer's government class at Module 10 (1 p.m.) to argue current events.

Modular programming does not only benefit the Eastons of Virgin Valley. It gives and take it cancels it out. And those opportunities forever bringing out facets of a young man's personality which no one except perhaps himself knew were there.

JESS ALGER, 16, who does work seven hours a night at a drive-in was hot on a Mesquite cafe backs the modular system.

Jess was interviewed on his free time. The deal makes it a lot easier to get your home work done, he said in the school's art room.

Like the other Jess takes modular courses. They may have him in World History on Module 3 (9 a.m.) on one day and on Module 15 (3 p.m.) the next. But the next day

It depends on the teacher available, but will be a half hour at a time — one module — an hour at a time — two modules — but he will have learned world history before he is done.

JESS WANTS to be a coach like his older brother is. But in his unexpected time he can learn by the computer — he likes to model cars.

Having finished his home work on school time Jess was doodling around with it when he was making up a head featuring an elongated nose, dramatically enlarged eyes, a curled mouth and a dramatically solemn expression. Independent tree had allowed the self-taught Mormon boy to create a perfect Aku-Aku.

Valley Students Give Themselves High Grade

By DONALD WARMAN
R-J Staff Writer

OVERTON — Government and civics classes at remote Moapa Valley High School were dismissed, finally, at 10 a.m. Thursday night.

About 50 politely bored teenagers were sent home to rest up for Friday classes after they listened to the routine business of the Clark county school board for two hours.

BUT THEY had their own turn on the floor, too.

Frank Perez, a dark-haired boy of Latin descent, and three of his fellow students arrived the school board that things are going well at Moapa Valley.

"We think we have one of the best small schools anywhere," said Peres in a report to board members. The trustees recently agreed to go out into the field occasionally to see how the students in the outlying areas feel.

FRANK PEREZ feels good

"Our school has been governed by a student commission since 1938," he said. "All our students are accepted, regardless of racial or economic status. The treatment of the In-

(See TRUSTEES, Page 2)

dian children here is an outstanding example.

"Where else but here," he added in a smiling reference to the little community's predominant Mormonism, "could I be student body president?"

OTHER SIGNS of healthy times at Moapa Valley

From Max Davis — "Four of our best basketball players have straight 'A' averages.

"... I understand there is no huge demand in a small school, but I personally would like to see more foreign language offered." Only Spanish is taught now.

From Meldon Lyman — "As it is now, we have the second largest enrollment in foreign language percentage-wise in the district."

FROM KATHY Cottam — Our speech department won the three-way sweepstakes at the University of Nevada last year.

"I am convinced that we students at Moapa Valley are being offered outstanding opportunities."

A VISITOR from Mesquite brought even better tidings to the board. He was Blaine Allan, principal of Virgin Valley High, a school which is making nationwide educational history with its program of modular scheduling of pupils and courses.

"Four superintendents from Arkansas have called me with questions about our progress," Allan reported of the nine-week-old experiment, which is guided by data computers at Stanford University.

"NONE OF our students wants to go back to the conventional class cycle," he said.

In a hint of what he might have in mind for Virgin Valley's further progress into a revolutionary future, Allan told board members about a junior high school in Anaheim, Calif., which totally alters its class schedule every day, rather than on the weekly basis being used in the Mesquite secondary school.

"Here's an interesting idea," he added. "This school has a 'Hoodlum Room' where it assigns the kids who don't want to study. Then they can look into the hoods of cars or do whatever they are willing to learn from."

Where Classes Are Out, Learning In

By DONALD WARMAN
R-J Staff Writer

"I doubt," said Blaine Allen, "that any two pupils at Virgin Valley have the same schedule."

With one stunning exception, Allan is probably right.

R-J Extra

AT MESQUITE'S Virgin Valley High School, pupils are allowed — even encouraged — to live up to the best they can do.

They don't go to classes, in the conventional sense. They are programmed. Each may be assigned to a regular course, or to independent study, which is done in the art room, the library, or anywhere else where a kid can light, or to individual instruction.

THE SYSTEM allows Michael Clark, 16, Virgin Valley's art teacher, to coax reluctant arithmetic students into figuring their principles. Meanwhile, a natural-born artist like Jess Alger is off in the corner, sculpting his Aku-Aku.

BLAINE ALLAN
'Give them your trust'.

In a program which sorts out every individual, every interest, every course and every hour, the data computer at Stanford spilled out two identical modules. Modules are the basic system of measurement by which Virgin Valley kids go to school.

THE IDENTICALS are Mike Easton and his twin brother, Mack. Their schedule is the same, except that the pair divides up the school:

Mack is president of the student body (Student Council meets on school time at Virgin Valley) and his twin is editor of the yearbook.

Modular scheduling put each boy on his own, letting him find his special way. That the Easton kids found their way to stay together is just a proof of the accuracy of the system.

SAYS PRINCIPAL Allan:

"We've got kids coming in at 8 o'clock in the morning (Module 1) to study in the library. These were kids who wouldn't ordinarily get here until 9:30.

"The secret is this: You put them on their own, give them your trust and faith. You'd be amazed at what they'll do."

ALLAN WAS talking at 8 a.m. Meanwhile, Mike Easton was leafing through a newsmagazine in the library. He was looking for a topic to debate. His twin was dunking negatives of yearbook photos.

MIKE EASTON
The data computer . . .

A 17-year-old girl named Cathy Adams had not yet begun her set of modules. She was on the way in by school bus from Bunkerville. Before the day was over, she was going to defend girls who scream over the Beatles.

JESS ALGER, who is going to be a cook, found his mind wandering. He is a practical, matter of fact boy, but sometimes he gets to thinking about islands beyond the sea, and about aborigine gods who look like Aku Akus.

Virgin Valley High aims to locate each student, to put him through the machine, to find out what he wants to be and what he can be, then to go to work with him.

AT ALLAN'S desk is an inscription from Aristotle:

"Those who educate children well are more to be honored than even their parents, for the parents only give them life, while teachers give them the art of living well."

MACK EASTON
. . . kept them together
